

DayLight Generator Lamp, DGL4

Order No. 999-234

Studies that prove the positive effects of daylight on health and productivity have inspired a slew of lighting products that mimic the sun's brightness and color as it changes throughout the day. But there are other aspects of natural light's dynamism that are harder to replicate—like how it moves across a wall, for example, or filters in through the leaves of a neighboring tree.

Create a healing environment

Lighting plays an important role in healthcare, improving both the patient experience and the staff's ability to provide the required level of care. Not only a sustainable choice, lighting can enhance the care environment and reduce costs by saving energy and improving operational efficiency. The latest light technology from ATE™ provides a nurturing atmosphere for your patients and a dynamic working environment for your staff.

DGL4 is powered by SAR light, emitting the frequency as the sun. Other versions are available from 2500-5000 Kelvin.
